

RENSSELAER MOTORSPORT

2026-27 Sponsor Packet

We are Rensselaer Motorsport, Rensselaer Polytechnic Institute's Formula SAE team. We are a group of students who are devoted to engineering excellence who design, manufacture, and race a Formula style electric vehicle from scratch. In 2022 we challenged ourselves and transitioned into a fully electric vehicle. This challenge tested our capabilities and pushed ourselves to adapt and innovate. Being a smaller team consisting of 40 full members our team has proven our capability with our latest Vehicle RM29 which placed 5th at Formula Hybrid in New Hampshire this past year and 21st at FSAE Michigan. These accomplishments are just a glimpse into the future but we need your help to make sure that future is a reality.

2026 Accolades

21st Place - *FSAE Michigan*
 5th Place - *Formula Hybrid*
 2nd in Efficiency - *FSAE Michigan*
 IEEE Engineering the Future Award - *Formula Hybrid*
 Scrutineer's award - *Formula Hybrid*
 Test Equity award - *Formula Hybrid*
 Completed 22km Endurance - *FSAE Michigan*
 Passed all technical inspections - *FSAE Michigan*

Building off last years success, Rensselaer Motorsport is carrying the same knowledge and dedication into our latest challenger, RM30. By using the lessons learned from the previous season and the data gathered from running RM29, we will design and build a car that achieves our 2027 goals, shown below.

FSAE 2027 Goals

Top 15 Overall
Top 25 Design
Top 25 Cost
Top 15 Presentation
Top 20 Acceleration

Top 20 Skidpad
Top 20 Autocross
Top 15 Endurance
Top 10 Efficiency

Weight - - - **216kg**

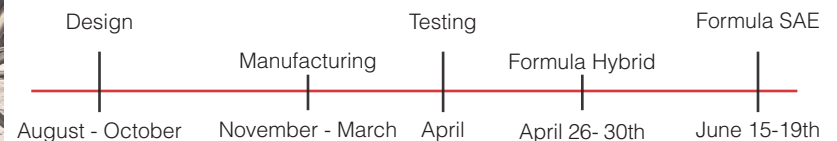

Torque - - - **260nm**

Power - - - **80kw**

Top Speed - - - **830 v**

RM30 will feature a brand new Battery design as well as improved Aerodynamics, electrical systems and overall quality.

We are transitioning into a All Wheel Drive Power train for the 2027/28 season

Why?

We want to remain a competitive team and work towards becoming a constant top 10 finisher by 2030. Currently, 13 of the top 20 teams at FSAE use an All Wheel Drive hub-motor system. A transition like this will keep our team competitive performance-wise, but it also challenges and pushes us to design and engineer around new technology, innovating not just our car but our skills for the future.

What is All Wheel Drive

The new all wheel drive system will utilize four in-hub motors connected to each wheel through planetary gearboxes. This new system is not simply adding new motors, but requires the entire corner assemblies to be redesigned, custom gear sets to be developed, and custom motor cooling to be implemented. In addition, torque vectoring algorithms will be developed, tested, and tuned to take full advantage of the all wheel drive capability.

GOALS

Goals

Place top 15 in the 2028 FSAE EV competition

Place top 10 in the 2029 FSAE EV competition

Allow student engineers to create a well-engineered product that can be featured on a portfolio or in a resume

Where we want to go

Why Sponsor Us?

Building our race car would not be possible without funding from sponsors and partners like you! We seek both cash donations as well as in-kind parts, materials, or tools. We consider the value of each in-kind support into the level system above.

Note that all cash donations are eligible for tax write-offs as we are a 501(c)(3) organization.
